

Q1.Problem Brief:

We want to implement a ratings and reviews system. User can able to write a review on click on “write a review” button, it will open a modal review submission form . Once review submitted it need to display on the same page. User can able to sort reviews on basis “most helpful”,”most recent”,”highest first”,”lowest first”.

Problem statement:

- Follow the below design and make it responsive
- Create a review **JSON** data object for your all submitted reviews to make the sort happen.
- Feel free to use any JS frameworks (like **React JS**) or **Core JS** to build this application.

What are we looking for:

- DRY(Don't Repeat yourself).
- Code structure and organization.
- Simplicity and ease of understanding the code.
- Understanding of **JavaScript, Unit Test, HTML, JSON** and **CSS**.
- Use any preprocessor for writing styles (**SCSS / LESS**)
- preferred : javascript build automation tools like **webpack,grunt,gulp** etc

Brownie Points:

- Make the page Responsive i.e. device friendly (**iPad, iPhone, Android**) and compatible with all modern browsers.
- Creativity in terms of look and feel of the page. (**Do not use CSS frameworks like Bootstrap, Foundation** etc)
